Application rate for Agri-Fab broadcast spreaders is a general setting of 3 to 5 for light to heavy application calculated at a speed of 3 mph, or 100 ft in 23 seconds. There are variables depending on the size, shape and weight of the product you will be spreading. A rule of thumb is go on the conservative side and crisscross

Products > 130 lb. Tow Spreader - Agri-Fab

Choosing the right spreader for your lawn. You'll need to know the size of your lawn to help determine which size spreader you need. For a rectangular or square lawn, simply multiply the length times the width for total square feet. If your lawn is a triangle, multiply the length of the base times the height, and divide that number by 2.

Agri-Fab Speedeart - Catalogue

While the broadcast spreader provides excellent distribution of fertilizer and is a good choice for spreading seed and ice melt, Agri-Fab strongly discourages its use for powder lime. This USA-made broadcast spreader is designed for towing only and cannot be converted for manual pushing. This product may be covered by a limited one-year warranty.

Agri-Fab 45-0211 125-Pound Tow Broadcast Spreader

Dear Tom - The model number of this spreader is 45-0547. If you have an Agri-Fab spreader, the model number sticker is located below the hopper it reads "This model number needed to order parts". Agri-Fab 85 lb. Push Broadcast Spreader-45-0388 - The Home ...

With a commercial-grade gearbox and easy-set controls, the Agri-Fab, Smart Spreader 130 lb. Tow Spreader is designed to be towed by a lawn tractor in order to spread ice melt, fertilizer and seed up to a 12 ft. spread width. The spreader holds up to 130 lb. of product and features a hitch that is compatible with most lawn tractors.

In the period of about five years since the first edition of this book appeared, many changes have occurred in the fruit juice and beverage markets. The growth of markets has continued, blunted to some extent, no doubt, by the recession that has featured prominently in the economies of the major consuming nations. But perhaps the most significant area that has affected juices in particular is the issue of authenticity. Commercial scandals of substantial proportions have been seen on both sides of the Atlantic because of fraudulent practice. Major strides have been made in the development of techniques to detect and measure adulterants in the major juices. A contri bution to Chapter 1 describes one of the more important scientific techniques to have been developed as a routine test method to detect the addition of carbohydrates to juices. Another, and perhaps more welcome, development in non-carbonated beverages during the past few years is the rapid growth of sports drinks. Beverages based on glucose syrup have been popular for many years, and in some parts of the world isotonic products have long featured in the sports arena. A combination of benefits is now available from a wide range of preparations formulated and marketed as sports drinks and featuring widely in beverage markets world-wide. A new chapter reviews their formulation and performance characteristics. Another major trend in the area of fruit-containing non-carbonated bever ages is the highly successful marketing of ready-to-drink products.

Air Emissions from Animal Feeding Operations: Current Knowledge, Future Needs discusses the need for the U.S. Environmental Protection Agency to implement a new method for estimating the amount of ammonia, nitrous oxide, methane, and other pollutants emitted from livestock and poultry farms, and for determining how these emissions are dispersed in the atmosphere. The committee calls for the EPA and the U.S. Department of Agriculture to establish a joint council to coordinate and oversee short - and long-term research to estimate emissions from animal feeding operations accurately and to develop mitigation strategies. Their recommendation was for the joint council to focus its efforts first on those pollutants that pose the greatest risk to the environment and public health.

A sloop-to-mus introduction to small, economical sailing craft Trailer sailers—the smallest, most economical sailboats with sleeping accommodations—are a popular platform for learning the basics of sailing and are often considered to be the entry level to cruising under sail. Author Brian Gilbert shows how trailer sailers can be the ideal craft for a lifetime of enjoyment, including serious, long-distance cruising. This book covers all the bases, including how to inspect, buy, and equip a boat; how to trailer, sail, navigate, and cruise in small boats; how to use communications and navigation equipment; and more.

This book provides information about the sources, structure, and properties of keratin as well as its applications. The extraction from different biomass sources (e.g. feathers, hairs, nails, horn, hoof, and claws) as well as the characterization methods of these extracted materials are explained. The development of bioproducts from keratins is challenging and limited since they are neither soluble in polar solvents nor in non-polar solvents. Therefore, the utilization of different microorganisms for the degradation of keratin is also discussed. The main aim of this book is to highlight the unique features of keratin and to update readers with the possible prospects to develop various value-added products from keratins. The book is highly interesting to researchers working in industry and academia on bioproducts, tissue engineering, biocomposites, biofilm, and biofibers.

This book offers a comprehensive compilation of biotic and abiotic factors that affect lychee production and commercialization. It addresses disease management for a range of causal agents, including the leaf mite (Acerya litchi Keifer), leaf miner (Conopomorpha cramerella), fruit borers (Conopomorpha cramerella, Platyplus aprobola Meyer and Dichocrossis sp.), leaf webber / roller (Platypepla aprobola Meyer), litchi bug (Tessarotoma javanica Thumb), bark-eating caterpillars (Indarbela quadristriata) and shoot borer (Chlumetia transversa), etc. Specialized chapters highlight potential approaches to optimizing and increasing the scope of lychee export, as well as systematic research on the development and refinement of technologies for enhancing lychee productivity and quality. Further aspects addressed include post-harvest handling, processing and value addition, the development of tolerant varieties, high yield and processing. As such, 'Lychee Disease Management' offers a valuable resource dedicated to the global agriculture community, which is currently facing considerable production and commercialization problems.
