Every day for the next twenty years, more than 10,000 people in the United States will turn 65. With life expectancies increasing as well, many of these Americans will eventually require round-the-clock attention—and we have only begun to prepare for the challenge of caring for them. In Labors of Love, Jason Rodriquez examines the world of the fast-growing elder care industry, providing a nuanced and balanced portrait of the day-to-day lives of the people and organizations that devote their time to supporting America's aging population. Through extensive ethnographic research, interviews with staff and management, and analysis of internal documents, Rodriquez explores the inner workings of two different nursing homes—one for-profit and one non-profit—to understand the connections among the administrative regulations, the professional requirements, and the type of care provided in both types of facilities. He reveals a variety of challenges that nursing home care workers face day to day: battles over the budget; the administrative hurdles of Medicaid and Medicare; the employees' struggle to balance financial stability and compassionate care for residents. Yet, Rodriquez argues, nursing home workers give meaning and dignity to their work by building emotional attachments to residents and their care. An unprecedented study, Labors of Love brings new insight into the underlying structures of a crucial and expanding sector of the American health care system.

Nursing embodies the seemingly timeless characteristics of feminine healing, caring, and nurturing, yet this archetypally female vocation also boasts a distinctive and complex history. Bedside Matters traces four generations of Canadian nurses to explore changes in who became nurses, what work they performed, and how they organized to defend their occupational interests. Whether in the apprenticeship method of the early twentieth century or in the present day restructuring of hospital work, the position of nurses within the health-care system has been structured by class, gender, and ethnic and racial relations. Located between the doctors and untrained or subsidiary patient-care attendants, nurses have struggled to define the boundaries of their occupation vis-à-vis other members of the health-care hierarchy, even as tensions between bedside and administrative nurses created divisions within nursing itself. Focusing on the daily labours of 'ordinary nurses', McPherson argues that the persisting sex-typing of nursing as women's work has meant that gender consistently complicated nursing's easy categorization as either professional or proletariat. Combining archival records and oral histories, the author shows how nurses, in their work, activities, and social and sexual attitudes, sought recognition as skilled workers in the health-care system.
