The protection which is installed on an industrial power system is likely to be subjected to more difficult conditions than the protection on any other kind of power system. Starting with the many simple devices which are employed and covering the whole area of industrial power system protection, this book aims to help achieve a thorough understanding of the protection necessary. Vital aspects such as the modern cartridge fuse, types of relays, and the role of the current transformer are covered and the widely used inverse definite-minimum time overcurrent relay, the theory of the Merz-Price protection system and the development of the high-impedance relay system are critically examined. This new edition has come about in response to the dramatic change from the use of electro-magnetic relays to electronic and micro-processor relays which figure in practically all new installations. Therefore, although the theory and usage are the same, the application can be much improved owing to the increased range and accuracy and the added facilities provided with the modern relays. This book reflects the change and explains the technical advantages.

The President's daughter. Two professional athletes. One giant scandal. They'll show her that two bad boys are better than one. I can't stand arrogant bad boys - especially not when they're my loud, obnoxious new next-door neighbors. Not even when they come in muscled, tattooed, too-hot-for-their-own-good packages. I'm a good girl - successful, responsible, and smart. I have to be - the eyes of the nation are on me. I'm the daughter of the President of the United States. Dating a filthy, cocky, possessive football player would be the ultimate scandal. Falling in love with TWO arrogant athletes in the middle of my father's re-election campaign? That would be another thing entirely. I'm twice as screwed.
