Background reading and activities used for EMP Teacher Training. Practical tips for developing texts and activities for health care professionals.

When reading and writing medical and nursing texts, Health Care Professionals require an understanding of medical, hospital and everyday health terminology. As well as this, Health Care Professionals need to be able to write fluently in patient notes, in referral letters and when completing care plans or care pathways. English for Medical Purposes: Spelling and Vocabulary provides spelling tips for common errors and helps develop extensive glossaries in the areas of patient care encountered in hospitals and also in the community. Common phrases and collocations are listed to familiarise students with the language they will use both in the workplace and in academic writing.

Racial and ethnic disparities in health care are known to reflect access to care and other issues that arise from differing socioeconomic conditions. There is, however, increasing evidence that even after such differences are accounted for, race and ethnicity remain significant predictors of the quality of health care received. In *Unequal Treatment*, a panel of experts documents this evidence and explores how persons of color experience the health care environment. The book examines how disparities in treatment may arise in health care systems and looks at aspects of the clinical encounter that may contribute to such disparities. Patients' and providers' attitudes, expectations, and behavior are analyzed. How to intervene? *Unequal Treatment* offers recommendations for improvements in medical care financing, allocation of care, availability of language translation, community-based care, and other arenas. The committee highlights the potential of cross-cultural education to improve provider-patient communication and offers a detailed look at how to integrate cross-cultural learning within the health professions. The book concludes with recommendations for data collection and research initiatives. *Unequal Treatment* will be vitally important to health care policymakers, administrators, providers, educators, and students as well as advocates for people of color.
