Investment Science is designed for the core theoretical finance course in quantitative investment and for those individuals interested in the current state of development in the field -- what the essential ideas are, how they are represented, how they are represented, how they can be used in actual investment practice, and where the field might be headed in the future. The coverage is similar to more intuitive texts but goes much farther in terms of mathematical content, featuring varying levels of mathematical sophistication throughout. The emphasis of the text is on the fundamental principles and how they can be mastered and transformed into solutions of important and interesting investment problems. End-of-the chapter exercises are also included, and unlike most books in the field, Investment Science does not concentrate on institutional detail, but instead focuses on methodology.

Working the Story: A Guide to Reporting and News Writing for Journalists and Public Relations Professionals is far more than a textbook for students and newcomers to news reporting and public relations. It is an invaluable reference guide for professionals in both fields. Best of all, it follows its own teachings: it is concise and to the point, easy to read, and clearly understandable. Unlike other works in the field, it does more than just offer advice to writers on how to write. It provides the background every reporter and public relations professional needs to do the job, from how governmental bodies work to how to cover a board meeting. Douglas Perret Starr and Deborah Williams Dunsford not only explain what to look for and how to write a news article but also offer advice on how news stories should be written for greatest impact or how to generate copy for different media types, from the printed page to the computer screen to the radio and television broadcast. Drawing on a lifetime of study and practice, Starr and Dunsford cover a vast array of topics: techniques for interviewing, covering, and writing hard news stories, features, columns, and arts reviews; what public relations is, what it is not, and how it interrelates to newswriting; and speech ghostwriting and preparing corporate spokespersons for crises, briefings, and hostile interviews. Working the Story also includes eminently practical appendices on everything from keyboard shortcuts to common word definitions and usages in news reporting, from freelancing to applying for a job. Intended for beginners and seasoned professionals alike, Working the Story should sit near the keyboard of every student, every reporter, and every public relations officer and publicist.

Planes follows Dusty Crophopper (voiced by Jon Cryer), a big-hearted, speed-loving crop duster who dreams of competing in the toughest and most exhilarating around-the-world air race in history. With the support of friends old and new, Dusty reaches heights he never dreamed possible—and in the process, gives a world the inspiration to soar. Boys ages 4-6 who like Disney/Pixar Cars will love this easy-to-read chapter book based on the hit film Disney Planes.

In this practical book, family counselor and best-selling author Gary Smalley, with John Trent, reveals a simple yet profound plan for a marriage of depth, warmth, and excitement. Guide your marriage for a lifetime by learning how to make your spouse feel truly honored, keep courtship alive, rebuild trust, and become best friends with your family. According to Smalley, good marriages are no accident. And deciding to love-in the practical ways outlined here-can result in relationships that are tougher than tough times.

Cardinal Education is an educational consulting and tutoring company based in Palo Alto, CA. Guided by a philosophy of fulfilling students' academic potential in a way that boosts skills and confidence for life, we work to maximize successful middle school, high school, and college admissions outcomes. While some of our methods defy “ conventional wisdom, ” we have a proven track record with a broad range of students: the Ivy League bound to those wishing to avoid community college, the self-motivated to the intransigently jaded, and the profoundly gifted to learning disabled. We have a passion for expanding students' dreams and helping them attain their goals. Cardinal Education believes in the social value of a strong public education system and sponsors pro bono programs to bring private sector expertise to bear. However, government fiscal policies are shortchanging public schools of opportunities: activities, sports, variety of classes, advanced classes, student: teacher ratios, and counseling departments. The “ private school imperative ” means that despite economic trends, admission to private school is becoming so competitive that it necessitates standardized testing excellence. The philosophy of this math workbook is rigor and drill. Because this is the first test students take that actively tries to trick students at every turn, students who sit for these standardized exams need reflexive familiarity with computation (math facts), problem types, and strategy. The entrance exams are the first standardized tests for which budgeting time is a significant issue. Students need to spend the majority of time on analysis to avoid getting tricked rather than computation. By building skills, speed, and confidence, we hope to eliminate anxiety and give students a solid foundation on which to build excellent scores. This book is intended as a supplement for our highly trained staff, so it does not include strategies. However, motivated students can use it successfully with occasional help from a teacher or parent. Each chapter is comprised of units, with each unit comprised of 4 problem sets of difficulty, increasing in a logically progressive manner. Students should do as many of the 4 problem sets for each unit as it takes to achieve a 90% accuracy rate. Students taking lower level exams should complete problems 1-10 in each set. Students competing for high school admissions should complete each problem set in its entirety. Questions or feedback: Info@CardinalEducation.com

Nowhere is the conflict between economic progress and environmental quality more apparent than in the mineral extraction industries. The latter half of the 20th century saw major advances in the reclamation technologies. However, mine water pollution problems have not been addressed. In many cases, polluted mine water long outlives the life of the mining operation. As the true cost of long-term water treatment responsibilities has become apparent, interest has grown in the technologies that would decrease the production of contaminated water and make its treatment less costly. This is the first book to address the mine water issue head-on. The authors explain the complexities of mine water pollution by reviewing the hydrogeological context of its formation, and provide an up-to-date presentation of prevention and treatment technologies. The book will be a valuable reference for all professionals who encounter polluted mine water on a regular or occasional basis.
