A people's writings can play a dramatic role in nation building, as the development of modern Hebrew literature powerfully illustrates. Since the end of the nineteenth century, Hebrew writers in Europe and Palestine/Israel have produced texts and consolidated moments in the shaping of national identity. Yet, this process has not always been a unified and continuous one. The processes of canon formation and the suppression of heterodox discourses have been played out publicly and vociferously. Producing the Modern Hebrew Canon offers a sweeping view of the entirety of modern Hebrew literature, from Berdichevski and Agnon to Shammass and Habiby, shedding light on the moments of rupture and reversal which have undermined efforts to construct a hegemonic Zionist narrative. It provides a model for understanding the relations between minority and majority voices in postcolonial situations, showing these processes working and changing over time, from the earliest days of the creation of a labor Zionist sensibility for literature to Israeli state culture and the discourses of Arab otherness. By illuminating both the process of canon formation as well as the voices excluded from the canon, Producing the Modern Hebrew Canon offers a powerful alternative reading of twentieth century Hebrew fiction.

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

The Darkness will strike again ... The last time Carl, Volka, and 6T9 fought the Dark, 6T9 failed Volka. If he wants her and all the carbon based life forms that he loves to survive, he needs to change. Change for an android is as easy as flipping a switch, but dealing with the consequences is not so simple. To save Volka, he'll have to give up part of himself that Volka adores. He'll need to become something an innocent, peace loving sex 'bot was never designed to be, something he despises. To save Volka and the galaxy he'll need to become ... Android General 1.

Find the right innovation model Innovation is a much-used buzzword these days, but when it comes to creating and implementing a new idea, many companies miss the mark—plans backfire, consumer preferences shift, or tried-and-true practices fail to work in a new context. So is innovation just a low-odds crapshoot? In *The Architecture of Innovation*, Harvard Business School professor Josh Lerner—one of the foremost experts on how innovation works—says innovation can be understood and managed. The key to success? Incentives. Fortunately, new research has shed light on the role incentives can play in promoting new ideas, but these findings have been absent from innovation literature—until now. By using the principles of organizational economics, Lerner explains how companies can set the right incentives and time horizons for investments and create a robust innovation infrastructure in the process. Drawing from years of experience studying and advising companies, venture capital firms, and an assortment of governments around the globe, Lerner looks to corporate labs and start-ups, and argues that the best elements of both can be found in hybrid models for innovation. While doing so, he uses a wide range of industry-rich examples to show how these models work and how you can put them into practice in your own organization. Practical and thought-provoking, *The Architecture of Innovation* is the missing blueprint for any company looking to strengthen its innovation competence.

Lithium batteries may hold the key to an environmentally sustainable, oil-independent future. From electric cars to a "smart" power grid that can actually store electricity, letting us harness the powers of the sun and the wind and use them when we need them, lithium—a metal half as dense as water, found primarily in some of the most uninhabitable places on earth—has the potential to set us on a path toward a low-carbon energy economy. In *Bottled Lightning*, the science reporter Seth Fletcher takes us on a fascinating journey, from the salt flats of Bolivia to the labs of MIT and Stanford, from the turmoil at GM to cutting-edge lithium-ion battery start-ups, introducing us to the key players and ideas in an industry with the power to reshape the world. Lithium is the thread that ties together many key stories of our time: the environmental movement; the American auto industry, staking its revival on the electrification of cars and trucks; the struggle between first-world countries in need of natural resources and the impoverished countries where those resources are found; and the overwhelming popularity of the portable, Internet-connected gadgets that are changing the way we communicate. With nearly limitless possibilities, the promise of lithium offers new hope to a foundering American economy desperately searching for a green-tech boom to revive it.

Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle.
