The classic personal account of Watson and Crick's groundbreaking discovery of the structure of DNA, now with an introduction by Sylvia Nasar, author of *A Beautiful Mind*. By identifying the structure of DNA, the molecule of life, Francis Crick and James Watson revolutionized biochemistry and won themselves a Nobel Prize. At the time, Watson was only twenty-four, a young scientist hungry to make his mark. His uncompromisingly honest account of the heady days of their thrilling sprint against other world-class researchers to solve one of science's greatest mysteries gives a dazzlingly clear picture of a world of brilliant scientists with great gifts, very human ambitions, and bitter rivalries. With humility unspoiled by false modesty, Watson relates his and Crick's desperate efforts to beat Linus Pauling to the Holy Grail of life sciences, the identification of the basic building block of life. Never has a scientist been so truthful in capturing in words the flavor of his work.

Cutting edge information that connects biology to students' lives. Campbell Biology: Concepts & Connections, Seventh Edition—Go Wild! Campbell Biology: Concepts & Connections, Seventh Edition—always accurate, always current, and always the most pedagogically innovative non-majors biology text. This bestselling text has undergone an extensive revision to make biology even more approachable with increased use of analogies, real world examples, and more conversational language. Using over 200 new MasteringBiology activities that were written by the dynamic author team, your students arrive for class prepared. The book and MasteringBiology together create the classroom experience that you imagined in your wildest dreams.

Coleen Belk and Virginia Borden Maier have helped students demystify biology for nearly twenty years in the classroom and nearly ten years with their book, Biology: Science for Life with Physiology. In the new Fourth Edition, they continue to use stories and current issues, such as discussion of cancer to teach cell division, to connect biology to student's lives. Learning Outcomes are new to this edition and integrated within the book to help professors guide students' reading and to help students assess their understanding of biology. A new Chapter 3, "Is It Possible to Supplement Your Way to Better Health? Nutrients and Membrane Transport," offers an engaging storyline and focused coverage on micro- and macro-nutrients, antioxidants, passive and active transport, and exocytosis and endocytosis. This package contains: Biology: Science for Life with Physiology, Fourth Edition

For non-majors/mixed biology courses. An Inquiry Approach that engages students in critical thinking through the use of relatable case studies and more. With a proven and effective tradition of engaging readers with real-world applications, high-interest case studies, and inquiry-based pedagogy, Biology: Life on Earth fosters a lifetime of discovery and scientific understanding. Maintaining the conversational, question-and-answer presentation style that has made the text a best-seller, the Eleventh Edition continues to incorporate true and relevant Case Studies throughout each chapter, along with new, more extensive guidance for developing critical thinking skills and scientific literacy. MasteringBiology™ not included. Students, if MasteringBiology is a recommended/mandatory component of the course, please ask your instructor for the correct ISBN and course ID. MasteringBiology should only be purchased when required by an instructor. Instructors, contact your Pearson representative for more information. MasteringBiology is an online homework, tutorial, and assessment product proven to improve results by helping students quickly master concepts. Students benefit from self-paced tutorials that feature personalized wrong-answer feedback and hints that emulate the office-hour experience and help keep students on track. With a wide range of interactive, engaging, and assignable activities, students are encouraged to actively learn and retain tough course concepts.

CD-ROM contains: investigations, videos, word study & glossary, cumulative tests and chapter guides.

Offers a midterm and final exam in biology like those given by the Big 10 schools, to help students prepare

This book collects the Proceedings of a workshop sponsored by the European Molecular Biology Organization (EMBO) entitled "Proteins Involved in DNA Replication" which was held September 19 to 23, 1983 at Vitznau, near Lucerne, in Switzerland. The aim of this workshop was to review and discuss the status of our knowledge on the intricate array of enzymes and proteins that allow the replication of the DNA. Since the first discovery of a DNA polymerase in *Escherichia coli* by Arthur Kornberg twenty eight years ago, a great number of enzymes and other proteins were described that are essential for this process: different DNA polymerases, DNA primases, DNA dependent ATPases, helicases, DNA ligases, DNA topoisomerases, exo- and endonucleases, DNA binding proteins and others. They are required for the initiation of a round of synthesis at each replication origin, for the progress of the growing fork, for the disentanglement of the replication product, or for assuring the fidelity of the replication process. The number, variety and ways in which these proteins interact with DNA and with each other to the achievement of replication and to the maintenance of the physiological structure of the chromosomes is the subject of the contributions collected in this volume. The presentations and discussions during this workshop reinforced the view that DNA replication in vivo can only be achieved through the cooperation of a high number of enzymes, proteins and other cofactors.

"Through his teaching, his textbook, and his online blog, Michael D. Johnson sparks interest by connecting basic biology to real-world issues relevant to your life. Through a storytelling approach and extensive online support, Human Biology : Concepts and Current Issues, Seventh edition not only demystifies how the human body works but drives you to become a better, more discerning consumer of health and science related information." --

Biology: Life on Earth with Physiology, Tenth Edition continues this book's tradition of engaging non-majors biology students with real-world applications and inquiry-based pedagogy that fosters a lifetime of discovery and scientific literacy. Biology: Life on Earth with Physiology, Tenth Edition maintains the friendly writing style the book is known for and continues to incorporate true and relevant stories in every chapter in the form of the Case Study, Case Study Continued, and Case Study Revisited features. New to the Tenth Edition are Learning Goals and Check Your Learning, both of which help students to assess their understanding of the core concepts in biology. This new edition includes an increased focus on health science: Health Watch essays are included throughout units, and more anatomy & physiology content has been incorporated into the main narrative. Several of the popular, inquiry-based features, including Consider This and Have You Ever Wondered?, are new or refreshed. With this Tenth Edition, the authors continue to emphasize application with new or revised essays in Earth Watch, Science in Action, In Greater Depth, and Links to Everyday Life features. For courses not covering plant and animal anatomy & physiology, an alternate version-- Biology: Life on Earth, Tenth Edition--is also available.
