An essential aid to lesson planning and teaching, these resources provide a wealth of differentiated material designed to make teaching both foundation and higher tier students much easier.

This ultimate study guide with in-depth GCSE course coverage is all you need for exam success. Revise GCSE Biology has everything you need to achieve the GCSE grade you want. It is written by GCSE examiners to boost learning and focus revision.

An insight into the use of the finite method in geotechnical engineering. The first volume covers the theory and the second volume covers the applications of the subject. The work examines popular constitutive models, numerical techniques and case studies.

DT These highly successful revision guides have been brought right up-to-date for the new A Level specifications introduced in September 2000. DT Oxford Revision Guides are highly effective for both individual revision and classroom summary work. The unique visual format makes the key concepts and processes, and the links between them, easier to memorize. DT Students will save valuable revision time by using these notes instead of condensing their own. DT In fact, many students are choosing to buy their own copies so that they can colour code or highlight them as they might do with their own revision notes.

This teacher pack provides material to teach and prepare students for OCR 21st Century 2011 Additional Science GCSE with complete coverage of the specification modules B4, B5, B6, C4, C5, C6, and P4, P5, P6 which make up the Additional Science GCSE and the middle parts of the three separate science GCSEs. -Teach with confidence - with comprehensive teacher resources matched to our student books and Scheme of Work, supported by detailed lesson plans, worksheets, ideas for practicals with full technicians' notes, and admin support- Deliver outstanding lessons - our lesson plans are fully matched to the new specification, with Learning Objectives and Outcomes, Controlled Assessment Skills, and teacher guidance built into each lesson-Ensure achievement for every student - differentiated lesson plans and worksheets laid out in bitesize chunks enable you to plan for and teach low-ability and high-achieving students-Improve Controlled Assessment performance and results - practical activities and worksheets build skills, with opportunities for assessment highlighted in lesson plans-Reduce planning time - our student books, teacher packs, homework activities, interactive books and assessment package are fully integrated and matched to our scheme of work so you can get started straight away-Provide support for all your teachers - new or non-specialist teachers can confidently pick up and teach with ready-to-use classroom resources; experienced teachers can save time and browse for new ideas-Introduce exciting Bad Science lessons to engage all students with science in the media and HSW and use our CPD videos to develop outstanding teaching in your department

Evolutionary innovations—the bony skeleton of vertebrates, avian flight, or the insect pollination system of angiosperms, for example—have in

recent years become the focus of much fertile new research in evolutionary biology. Innovations may hold the keys to understanding why whole new groups of organisms evolve or, conversely, why groups of organisms become extinct. This volume brings together contributors from the fields of morphology, genetics, embryology, physiology, and paleontology to present research on evolutionary innovations and to suggest directions for further work. The topics covered include the plurality of evolutionary innovations, patterns and processes at different hierarchical levels, evolutionary genetics of adaptations, heterochrony and other mechanisms of radical evolutionary change in early development, developmental mechanisms at the origin of morphological novelty, the evolution of morphological variation patterns, functional design and its punctuated products, plausibility and testability in assessing the consequences of evolutionary innovations, paradigms and pitfalls of studying physiological evolution, polyphyletic constructional breakthroughs in fossil and extant species, ecology of evolutionary innovations in the fossil record.

The construction materials industry is a major user of the world's resources. While enormous progress has been made towards sustainability, the scope and opportunities for improvements are significant. To further the effort for sustainable development, a conference on Sustainable Construction Materials and Technologies was held at Coventry University, Coventry, U.K., from June 11th - 13th, 2007, to highlight case studies and research on new and innovative ways of achieving sustainability of construction materials and technologies. This book presents selected, important contributions made at the conference. Over 190 papers from over 45 countries were accepted for presentation at the conference, of which approximately 100 selected papers are published in this book. The rest of the papers are published in two supplementary books. Topics covered in this book include: sustainable alternatives to natural sand, stone, and Portland cement in concrete; sustainable use of recyclable resources such as fly ash, ground municipal waste slag, pozzolan, rice-husk ash, silica fume, gypsum plasterboard (drywall), and lime in construction; sustainable mortar, concrete, bricks, blocks, and backfill; the economics and environmental impact of sustainable materials and structures; use of construction and demolition wastes, and organic materials (straw bale, hemp, etc.) in construction; sustainable use of soil, timber, and wood products; and related sustainable construction and rehabilitation technologies.

This student book provides material to teach and prepare students for OCR 21st Century 2011 Additional Science GCSE with complete coverage of the specification modules B4, B5, B6, C4, C5, C6, and P4, P5, P6 which make up the Additional Science GCSE and the middle parts of the three separate science GCSEs. This book will provide you with complete coverage of the new OCR Twenty First Century Additional Science specification:- Plan and teach low-ability and high-achieving students with differentiated student book content laid out in clear, bitesize sections- Engage your students with content that is presented in a clear and fresh way- Establish and build on prior knowledge with a quick recap of KS3 and a direct link to the GCSE content that will follow at the start of each module- Build and apply the skills needed to understand and carry out controlled assessment- Show the relationship between module content to paint the bigger picture with the summary chart at the end of each module- Encourage students take responsibility for what they have learnt and need to develop by using the student-friendly module checklist that matches the specification- Help students improve to a higher grade with worked examples with explanations of how to improve and exam-style practise questions-This student book links to other components in Collins' OCR GCSE Sciences series as well as to other Collins GCSE Science resources- Capture the interest of students with activities exploring science in the media based on Bad Science by Ben Goldacre
