This book responds to a growing demand in the academic community for a focus on customer-related proactive behaviour in the study of radical innovation development, combining a thorough theoretical discussion with detailed international case studies considering the role of this proactivity in five firms engaged in the process. Unlike other studies

The concepts and tutorials presented in this book are for readers with little to no experience using geographic information systems (GIS) software. This book is intended for use in an introductory college-level course with freshman students as the target audience. Each of the seven chapters represents approximately two weeks of work for a three-credit 16-week semester course. Each chapter starts with text related to fundamental concepts related to geospatial science and its sub-disciplines: Geodesy Remote Sensing Mobile Mapping Geographic Information Systems Cartography Each chapter also includes one or more tutorials designed to reinforce the concepts learned. These tutorials are suitable for undergraduate lab assignments. Tutorials may take between one to six hours to complete, depending on their complexity. When possible, the authors provide an estimated time to complete tutorials. Additional references, such as video content and external websites, may also be mentioned throughout the text. The second edition of this book includes new tutorials, updated material. Also, it has undergone a peer-review through Humboldt State University Press.

From the times of the dive tables the promising marketing statement is well known: Our xyz-tables are much more conservative than others. Also dive computers and simulation software for PC and/or tablet assert such claim. What does this suggest and is promised to the diver? Counterproductive to those statements are so-called " product recalls " feared by us as consumers, from which dive computers are not spared. And even the mathematical equations of dive computers – the algorithms – face marked criticism, especially regarding their validation: Have they been tested in real " wet " dives, and if so, how? In this eBook dive computers are evaluated how they perform in the field, specifics of various algorithms are unveiled without pestering the reader with mathematics, and finally some dreams of the future are outlined, to overcome the shortcomings of present-day dive computers. The preliminary assessment of the author is: Today ' s wrist worn dive computer gadgets have no future – but there are alternatives. Those who are unsure about a clear answer on the following questions should grasp this eBook and reserve some fun time reading it: Q1: What exactly are " deep stops " and what are pros and cons? Q2: Is the Buhlmann ZH-L16C dive computer model really from Professor Bühlmann? Q3: The RGBM model by Bruce Wienke is better than the VPM model – or isn ' t it? Q4: An ascent rate of 2 feet / 6 meters per minute is certainly better than 6 feet / 18 meters per minute – and easily to accomplish. Correct? Q5: The primary feature of dive computers should be: They need to be yellow! – What? Yellow!? In this eBook author Wolfgang Wild is sharing his long history of experience with the reader which he gained in the training of virtually thousands of both divers and diving instructors worldwide. This eBook is aimed at divers and diving professionals of all diver training associations. Available for iphone, kindle, kobo, sony reader, tolno and tablets in multiple formats.

\* GPS chapter completely updated to reflect newer models and features of GPS receivers now available \* Expanded to include a section on routefinding on glaciers, along with additional information on changing declination \* Extensive illustrated examples of orientation and wilderness navigation Proceed with confidence when heading off-road or off-trail with the second edition of Wilderness Navigation. Whether you are climbing a glacier, orienteering in the backcountry, or on an easy day hike, Mike and Bob Burns cover all the latest technology and time-tested methods to help you learn to navigate-from how to read a map to compasses and geomagnetism. Bob Burns is a long-time member of The Mountaineers. He has taught classes in the use of map and compass since the late 1970s. Mike Burns is an avid climber. He has instructed climbing and navigation classes, and written articles for Climbing magazine. Part of the The Mountaineers Outdoor Basics series! Created for beginning-to-intermediate enthusiasts, this series includes everything anyone would need to know about staying safe and having fun in the backcountry.
