This book presents the current advances and emerging trends in digital technologies for learning and education through a number of invited chapters on key research areas. It addresses information and communications technology (ICT) in a global context, reporting on emerging trends and issues in four areas – basic education, technical and vocational education, distance and continuing education and higher education –, as these four areas represent the primary contexts in which ICT is used to support learning and instruction. This book provides a brief overview of the potential benefits of ICT used in education and some of the best approaches in which different ICTs have been used in education thus far in a global context. It also presents the expertise and the most current research and practices of recognized international educators and researchers in the field of ICT in education. Third, this volume is both informative and transformative in its coverage of the conceptual and practical impact of technology on current educational practices, making it a valuable resource for

policymakers, educators and educational researchers around the globe.

This book explores how the Indian education and training system prepares young people for the world of work and for the requirements of the employment market – because India is a leading industrialised nation with a very young population and a high demand for a skilled workforce. Indian experts write from a course-specific perspective, offering a comprehensive picture of educational policy, curriculum design and cultural characteristics. The virtual absence of a formalised system of vocational training in India underlines the importance of this research.

Maps the politics and processes contributing to the distinct developmental trajectory of Tamil Nadu, southern India. Drawing upon fresh data, literature, policy documents and primary fieldwork, it seeks to explain the social and economic development of the state in terms of populist mobilization against caste based inequalities.

About CounsellingGuru CounsellingGuru is a comprehensive guide for all the Engineering aspirants of Tamilnadu. This book is aimed at providing complete information about engineering studies and statistical analysis on Tamilnadu Engineering Admissions [TNEA] counselling. It gives an insight to the reader about various branches of study in engineering and helps in selecting suitable branch of study based on one ' s personal preference and performance in final school year. Why CounsellingGuru?In the recent years, the interest towards engineering has increased among student community in Tamilnadu. Also in the last 13 years, the number of engineering colleges has increased approximately from 200 to 520+. In this scenario finding information about all the colleges and selecting the right branch in right college has become a tough task for any engineering aspirant. It is not easy, to come up with a right decision for one ' s career, based on the vast amount of information available in the internet and through other sources. One of the strongest motivations for writing this book is to provide complete information about different engineering branches, colleges, and the counselling process followed in Tamilnadu Engineering Admissions. Analyzing the information about previous year counsellings, helps a student to take an informed decision about the suitable branch and college for his/her rank. Based on the counselling trend from the year 2007 to till date, this book is aimed at addressing the basic questions like 1. For one's TNEA rank, which is the best college and course? 2. What are the top colleges for a particular branch? 3. What does one learn in a particular Engineering branch? 4. Which branch & college was selected by a candidate with

This book constitutes the proceedings of the First International Conference on Mining Intelligence and Knowledge Exploration, MIKE 2013, held in Tamil Nadu, India on December 2013. The 82 papers presented were carefully reviewed and selected from 334 submissions. The papers cover the topics such as feature selection, classification, clustering, image processing, network security, speech processing, machine learning, information retrieval, recommender systems, natural language processing, language, cognition and computation and other certain problems in dynamical systems.

The Global Innovation Index ranks the innovation performance of 142 countries and economies around the world, based on 84 indicators. This edition explores the impact of innovation-oriented policies on economic growth and development. High-income and developing countries alike are seeking innovation-driven growth through different strategies. Some countries are successfully improving their innovation capacity, while others still struggle.

The book covers all the important aspects of research methodology, and addresses the specific requirements of engineering students, such as methods and tools, in detail. It also discusses effective research in engineering today, which requires the ability to undertake literature reviews utilizing different online databases, to attribute credit for any prior work mentioned, to respect intellectual property rights while simultaneously maintaining ethics in research, and much more. Further, the book also considers soft skills like research management and planning, dealing with criticism in research and presentation skills, which are all equally important and need to include in research methodology education. Lastly, it provides the technical knowhow needed to file patents in academia, an important area that is often ignored in research methodology books. The book is a particularly valuable resource for PhD students in India and South East Asia, as research methodology is a part of their coursework.

Foreword In the modern world knowledge has become the chief instrument of human progress. The creation and application of knowledge, and therefore the creation of a country 's wealth is squarely predicated on the quality of its human resources. Human resources of a country have thus become a strategic consideration with the developed and the developing country 's alike. Many countries in Asia, Europe and the American continent are already reviewing and re-assessing their education systems with a futuristic perspective. India, upon its economic liberalization at the turn of the century, emerged as a strong contender world over, both in economic and technological arenas.

The promise of a large and educated work force, often referred to as the demographic dividend, has been a subject matter of discussion on various forums. However, down the road the country ' s education system seems to have gotten mired in vexing issues relating to quality and relevance of higher education. This is clearly reflected by the mounting pile of unemployable and un-trainable degree holders generated by the colleges and Universities of the country. This is likely to lead to unpleasant social and economic consequences in future. Need therefore arises to identify and address the issues that give rise to misalignments between the human resource needs of the country and its higher education apparatus. The discussion in the following chapters attempts to understand the disturbing undercurrents of our higher education system and suggest ways in which changes may be affected to make the system strong, vibrant and aligned to the interests of this great country.
