Glassdoor gives you an inside look at what it's like to work at Asian Infrastructure Investment Bank, including salaries, reviews, office photos, and more. This is the Asian Infrastructure Investment Bank company profile.

This book assesses the strategic significance of the Asian Infrastructure Investment Bank (AIIB) by examining the logic of international power and order, historic trends in East Asian international relations, the AIIB's design in comparison to 'rival' financial institutions such as the World Bank and the Asian Development Bank, recent tendencies in Chinese foreign policy, and the Chinese system of political economy. It focuses on how China 'constructs' international arrangements at a critical juncture in history compared to other great powers, especially the United States and Japan. Viewed in isolation, the AIIB does not represent a radical departure from the existing international order; it is a hybrid institution built on China's integration into the West-dominated international structure and conditioned by the global financial market. But the AIIB does draw in part from a different institutional lineage, a different historical root, and a different national system of political economy. In this context, China's greater success will constitute a partial change to the existing international order, whatever the Chinese intention.

The Asian Infrastructure Investment Bank, first opened in 2016, is a 100 billion dollar multilateral development bank purpose-built to support infrastructure projects that enhance regional economic productivity. Its arms reach far: in its first two years, AIIB has financed transport systems such as national motorways in Pakistan, railways in Oman, and rural roads in India; energy projects including natural gas pipelines in Azerbaijan and hydropower

plants in Tajikistan; and the redevelopment of impoverished areas in Indonesia. Initiated by China, its membership is global, with regional powers from Korea to Saudi Arabia, and key players from Europe, Africa, and Latin America. In a text that will appeal to general readers and legal specialists alike, Natalie Lichtenstein examines the Bank's mandate, investment operations, finance, governance, and institutional set up, as well as providing detailed analyses of the similarities and differences it has with other development banks - charting AIIB's story so far and anticipating its future.

The Asian Infrastructure Investment Bank (AIIB), which began operations in 2016 and now has an approved membership of eighty-four worldwide, has quickly become perhaps one of the world's most promising agents of global economic development. With its firm commitments to the twenty-first century imperatives of cost-effectiveness, zero tolerance for corruption and active promotion of environmental sustainability, its clearly stated aims and requirements echo the goal of reform that other multilateral institutions are undertaking. This book is among the first to offer an incisive introduction to the AIIB's law and governance, which are now essentially in place. From a perspective of Chinese multilateralism, which parts ways from the dominant twentieth-century Bretton Woods arrangements, the author provides in great depth the details of such elements of the Bank's Articles of Agreement as the following: – non-resident board system; – procurement; – role of trust funds; – state-owned enterprises as private entities; – immunity; – dispute settlement; – accountability for involuntary resettlement and human rights violations; and – policy on prohibited practices. Throughout, the author provides deeply informed comparisons with such existing multilateral development banks as the World Bank, the African Development Bank, the Asian Development Bank, the European Bank for Reconstruction and Development and the Inter-American Development Bank, as well as with the World Trade Organization. He shows how the AIIB not only emulates but also innovates while continuing to collaborate closely with these institutions. He suggests what should be done to optimize governance, standards and operations of the AIIB together with these peer institutions in a mutually emulating manner. Lawyers and policymakers involved in international economic law and related fields will welcome this nuanced and in-depth description and analysis of the AIIB. Its concomitant analysis of political economy and global governance issues will be of interest to bankers, businesses, government officials and others looking for an overall understanding of multilateral development banking and China's approach toward global governance in particular.

Studying the Asian Infrastructure Investment Bank (AIIB) through the lens of international relations (IR) theory, Chen argues that it is inappropriate to treat the AIIB as either a revisionist or a complementary institution. Instead, the bank is still evolving and the interaction of power, interests, and status that will determine whether the bank will go wild. Theoretically, the current shape of the AIIB will influence global strategic conditions and global perceptions of the bank itself, consequently affecting China's level of dissatisfaction with its power and status in the international financial system and maneuvering in the AIIB. To empirically show that, this book presents the evolution of the AIIB, compares the bank with its main competitors in the Asia-Pacific region, and conducts ten comparative case studies to show how countries around the world have positioned themselves in response to the emergence of the AIIB. This book presents critical insights for scholars and foreign-policy practitioners to understand China's surging influence in international organizations and how China can shape the world order. It should prove of interest to students and scholars of IR, strategic studies, China Studies, Asian Studies, developmental studies, economics, and global finance.

Studying the Asian Infrastructure Investment Bank (AIIB) through the lens of international relations (IR) theory, Chen argues that it is inappropriate to treat the AIIB as either a revisionist or a complementary institution. Offering a coherent overview of the historical and institutional context of enduring patterns in East Asian political economy, this updated and expanded second edition textbook explores the dramatic regional and international transformations that this key region has faced since the 2008 financial crisis.

China's Global Reach looks at China's emergence on the globe as a hegemonic power in the recent years. Moving beyond Volume I, this new volume empirically examines the most recent development of the Belt and Road Initiative (BRI) and the Asian Infrastructure Investment Bank (AIIB), the two most important initiatives launched by President Xi Jinping as China tries to emerge as a global power. The first part of the book presents an overview of geo-strategic development of the two initiatives. The second part examines domestic political dynamics, particularly Xinjiang as the core of BRI, in these two initiatives. The third part investigates the responses from the major foreign partners involved in the two initiatives, with a focus on the responses from India, African and Middle East countries. The chapters in this book were originally published in various issues of the Journal of Contemporary China.

Rising as a global power and regarding the existing world order unjust and unreasonable enough to meet the interests of both itself and other emerging powers, China has demanded reform to global governance, and taken new initiatives using its new quotient of wealth and influence to draw countries into its orbit. This comprehensive volume focuses on the two most important of these initiatives: the Belt and Road Initiative (BRI), launched in 2013 to strengthen China's connectivity with a large part of the world through infrastructure and economic development; and the Asian Infrastructure Investment Bank (AIIB), created in 2015, which represented China's effort in the reconstruction of the international development rules. This book explores how these two initiatives are central to China's emerging global strategy. The authors examine China's geopolitical and geo-economic motivations and domestic political dynamics in launching these two initiatives. They also investigate the responses from the major foreign partners involved in both initiatives. This book will be of great interest to students, academics and researchers of China's emerging global strategy. It comprises articles originally published in the Journal of Contemporary China.
