analysis,
interpretation, and
quality evaluation of
registries created
to increase
understanding of
patient outcomes.

For the purposes of

Download Free The Complete It

this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or

Download Free The Complete It

exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of

the following
purposes: to
describe the natural
history of disease,
to determine clinical
effectiveness or
cost-effectiveness
of health care
products and
services, to
measure or monitor

Registries are
classified according
to how their
populations are
defined. For
example, product
registries include
patients who have
been exposed to
biopharmaceutical
products or medical
devices. Health
services registries
consist of patients

who had a
common procedure,
clinical encounter,
or hospitalization.

Disease or
condition registries
are defined by
patients having the
same diagnosis,
such as cystic
