The Twentieth-Century World, 1914 to the Present introduces students to five distinct historical themes in 20th century history - politics, economics, religion, technology and the environment. Each of these themes is set in a social and cultural history framework that emphasizes the commonalities and diversity in human experiences throughout the recent era. This is a genuinely global textbook that takes a non-nationalistic approach to history and attempts to avoid marginalising the role of non-western actors and societies.

John Corbally explores the connections, interactions and exploitations of global resources and peoples that were part and parcel of 20th-century history. Economically, the book shows how people were connected by the spread of global capitalism and communism. It explores the spread of traditional religions and philosophies all over the globe, as well as looking at secular challenges. It also considers how technology reached further into people's lives. Ideal for undergraduate level students of 20th-century history, this is a book that offers a balanced, multi-perspective approach to recent global history, helping the 21st-century student understand today's world and interrogate commonly held assumptions about its history.

Throughout this lively and concise historical account of Mao Zedong's life and thought, Rebecca E. Karl places the revolutionary leader's personal experiences, social visions and theory, military strategies, and developmental and foreign policies in a dynamic narrative of the Chinese revolution. She situates Mao and the revolution in a global setting informed by imperialism, decolonization, and third worldism, and discusses worldwide trends in politics, the economy, military power, and territorial sovereignty. Karl begins with Mao's early life in a small village in Hunan province, documenting his relationships with his parents, passion for education, and political awakening during the fall of the Qing dynasty in late 1911. She traces his transition from liberal to Communist over the course of the next decade, his early critiques of the subjugation of women, and the gathering force of the May 4th movement for reform and radical change. Describing Mao's rise to power, she delves into the dynamics of Communist organizing in an overwhelmingly agrarian society, and Mao's confrontations with Chiang Kaishek and other nationalist conservatives. She also considers his marriages and

romantic liaisons and their relation to Mao as the revolutionary founder of Communism in China. After analyzing Mao's stormy tenure as chairman of the People's Republic of China, Karl concludes by examining his legacy in China from his death in 1976 through the Beijing Olympics in 2008.

From this major author comes a totally unique history of the twentieth century. Eschewing the traditional model for histories of this kind – blow-by-blow political narratives typically overloaded with detail - Jeremy Black offers us instead a brilliant thematic account of the last 100 years with the environment and the continuing strength of religious belief at its centre. Looking back to the 1910s and 1920s, Black begins with "the greatest issue of all" – the natural environment and its destruction, and moves to show how our world been transformed by urbanisation and development. Amazing developments took place across the century: men walked on the moon, the internet revolutionised communications; advances in health and medicine; developments in manufacturing and technology; economic

globalization – all have changed the way different parts of the world related to each other. How have these revolutionary changes impacted on religion and politics? In the final sections of the book, Black looks at the persistence and growing extremism in religious belief, how change creates instability and wars, and how power blocs emerged and collapsed in response to all these developments. This is twentieth century world history on a truly global scale. The Twentieth Century World forces us to rethink the way we view the past, and offers us a new way to understand the present.

Assesses the impact of humanity on twentieth century Earth, exploring the indirect effects of politics, international relations, technological change, key scientists, and environmental disasters and policies.

"One of those rare books that's both sweeping and specific, scholarly and readable...What makes the book stand out is its wealth of historical detail." —Elizabeth Kolbert, *The New Yorker*

The history of the twentieth century is most often told through its world wars, the rise and fall of communism, or its economic upheavals. In his startling book, J. R. McNeill gives us our first general account of what may prove to be the most significant dimension of the twentieth century: its environmental history. To a degree unprecedented in human history, we have refashioned the earth's air, water, and soil, and the biosphere of which we are a part. Based on exhaustive research, McNeill's story—a compelling blend of anecdotes, data, and shrewd analysis—never preaches: it is our definitive account. This is a volume in *The Global Century Series* (general editor, Paul Kennedy).
