3. Insertion and Removal of CO2 cartridges CO2 cartridges may explode at temperatures above 122 ° F (50 ° C). Do not mutilate or incinerate them. Do not expose them to heat or store CO2 cartridges at temperatures above 122 ° F (50 ° C). WARNING: Keep hands away from escaping CO2 gas. It can cause frostbite if allowed to

Represents an exploration of the relationship between imagination and reality as seen through the eyes of the dying Serge Valene, an inhabitant of a large Parisian apartment block.

This book presents the proceedings of the first IFIP WG 6.8 conference on Wireless Sensor and Actor Networks held in Albacete, Spain. The papers selected to be included in this volume illustrate the state-of-the-art and current trends in the area of wireless sensor and actor networks. The comprehensive program was organized into eight topics: Actors; Applications; Security; Energy; Quality of Service; Localization; Middleware; Protocols.

This publication is the result of the Edgeryders project, an online dialogue platform run by the Council of Europe with a view to promoting discussion with young people on the challenges of their transition to working life. Given that the imagination and the experiences of young citizens can only be understood in the context of horizontal relations (learning through sharing and joint management) in line with the networking approach, which restores the significance of individual effort and provides innovative solutions, a programme such as Edgeryders can provide a future-oriented alternative. In turn, institutions must show creativity. It is no longer a case of managing inertia, but above all of creating a balance between what the public authorities can do and what they can facilitate. By adopting a spirit of co-operation, the authorities can encourage the sharing of responsibilities, ideas, goods and values, while opening up to mutual learning. Nevertheless, this type of interaction is only possible if two conditions are met. Firstly, institutions must show a clear desire to ensure unprecedented scope for dialogue with young people by ascribing a high value to the proposals that emerge from the contacts among and with young citizens. Secondly, young people ' s interest in public affairs must be maintained in the long term by shoring up the online exchange with concrete evidence of legitimacy. This publication is intended to help meet these two conditions.

Includes Part 1, Number 1 & 2: Books and Pamphlets, Including Serials and Contributions to Periodicals (January - December)

This volume contains papers in the areas of artificial intelligence, expert systems, symbolic computing and applications to scientific

computing. Together, they provide an excellent overview of the dynamic state of these closely related fields. They reveal a future where scientific computation will increasingly involve symbolic and artificial intelligence tools as these software systems become more sophisticated; also a future where systems of computational science and engineering will be problem solving environments created with components from numerical analysis, computational geometry, symbolic computing and artificial intelligence.

The intriguing complexity, precision, and regulation of the wide range of biological processes is determined by intricate mechanisms of molecular recognition. Their nature is under intense scrutiny. In addition to the well-appreciated interaction of proteins either with amino acid or nucleotide sequences, the investigation of their interplay with carbohydrate elements of cellular glycoconjugates currently exerts increasing attraction. In the group of carbohydrate-binding proteins, lectins are distinguished from antibodies or ligand-affecting enzymes, according to the most recent definition. The thorough analysis of their structure and function is considered as a focus to collect a critical mass of information for delineating details of a further array of biochemical processes with pivotal physiological impact. Following an already century-long history of scientific description, reflected by subjectively chosen highlights (see the Brief History of Lectin Research at page VI), the excitement in glycobiological research that prevails today can easily be explained by our growing awareness of the multifarious significance of a sugar-code system of biological information. This present notion unmistakably has an impact on lines of research in diverse disciplines like cell and molecular biology, histochemistry, or clinical sciences. It also prompts inherent practical questions such as how to obtain lectins, or how to employ them as instruments in various assay systems with the best possible results. Thus, this book is devoted intentionally to cover the techniques in different research fields that deal with lectins.
